GOVERNOR RON DESANTIS ANNOUNCEMENTS

Governor Ron DeSantis of Florida Public Health Integrity Committee December 7, 2022

A Mom's Research updated Jan 2023 on the COVID-19 Vaccine

Pages after page 14 are previous research from July 2021

<https://www.bitchute.com/video/az6vXZgoI0rJ/> All good to watch but, key to watch Governor Desantis announcements (starting at about 1:22min in) at the last 20 minutes of hour and a half meeting of the recently formed Public Health Integrity Committee

Summary of Announcements by Governor DeSantis Below

TRUTH FOR HEALTH FOUNDATION Truthforhealth.org Tom Wadkins Dec 14, 2022

NEWS UPDATE!

FLORIDA'S GOVERNOR RON DeSANTIS ANNOUNCES ACTION on mRNA VACCINE ACCOUNTABILITY

In a bold, courageous and brilliantly planned three step process, Governor Ron DeSantis held a COVID-19 mRNA Vaccine Accountability Roundtable in West Palm Beach FL with national and international medical and scientific experts and vaccine-injured patients presenting the facts that demand investigation of these experimental products unleashed on humanity without full disclosure or adequate safety testing and oversight.

Truth for Health Foundation was pleased to have invited representatives, Elizabeth Lee Vliet MD, President and CEO, and Nicole Landers, RN, BSN, CCM, LNC, Director of the Foundation's COVID Care Strategy team, to be part of the virtual audience in support of Governor DeSantis strategic new initiatives:

1. Governor DeSantis has petitioned the Florida State Supreme Court to impanel a statewide Grand Jury on COVID-19 vaccines to investigate the misconduct of Big Pharm in deceiving the state regarding dangers of the experimental gene therapy injections.
2. The Governor directed Surgeon General Joseph Ladapo to initiate a surveillance program to investigate Florida cases of sudden death, modeled after the German autopsy study.
3. The Governor also formed a Florida Public Health Integrity Committee with a professional panel of physicians, scientists, other experts and patient advocates to evaluate the "narratives" of the CDC and counter the politicized false narrative from the government with accurate science based on the actual data being accumulated worldwide. The panel will provide recommendations for further action.

Governor DeSantis said other states will be joining the efforts, but he did not name others at this time.

All of these steps have been urgently needed since the experimental COVID injections were first

A Mom's Research updated Jan 2023 on the COVID-19 Vaccine

Pages after page 14 are previous research from July 2021

rolled out and within weeks, alarming safety signals occurred. Finally, we have a Governor with the courage to investigate Big Pharma and the deceptions and dangers unleashed on the public.

THIS, America, is how our Constitutional Republic is *supposed* to work, with states controlling all powers not specifically enumerated in the Constitution as belonging to the Federal government. Governor DeSantis' bold and courageous leadership at the state level is showing all of us how each State in the United States of America can exercise its investigative, legal, and judicial authority to investigate threats to the public safety of the citizens of that state, and hold wrongdoers accountable.

For all of us who have held firm to our faith that God is still in control, even when evil seems to be prevailing, this action by Governor DeSantis is truly a gift to all of us who have been fighting to bring Truth to people to help save lives and thwart the plans of the evildoers. May God bless and protect Governor DeSantis and his entire team.

In Christ, and for His Service,

Elizabeth Lee Vliet MD, President and CEO

TREATMENT for COVID and POST COVID VAX PROTOCOLS

In general, it is recommended to be on good (not necessarily grocery store) vitamins/supplements: Vitamin C, D, B, Zinc... for prevention and for healing after vaccination. It heals the body and builds natural immunity.

AUTOPHAGOCYTOSIS

Autophagocytosis is included in post vaccine treatment protocol links above with less time fasting.

One of the **most potent healing tools** you have probably heard about from many of our experts is getting your body into the state of **autophagocytosis**

"We're looking at 3 day maybe even 5, 7-day water fasting depending upon the situation, where we're allowing the body at the cell level to get into peak autophagocytosis so that the cell can actually start to

A Mom's Research updated Jan 2023 on the COVID-19 Vaccine

Pages after page 14 are previous research from July 2021

heal itself... because that's the most advanced mechanism of healing that every single person possesses.” - Dr. Henry Ealy

“... The only way is something called autophagy... which is the way the host gets rid of defective and faulty protein. And this is an evolutionary preserved

response.” - Dr. Paul Marik

“Your normal systems of getting rid of things like the spike protein, normally you would use something called autophagy for your body to digest things like the spike protein, things that aren't

supposed to be there.” - Dr. Syed Haider

A Mom's Research updated Jan 2023 on the COVID-19 Vaccine

Pages after page 14 are previous research from July 2021

There's more than one way to bring the state of autophagy on. And when you do... Your body enters a period of rapid self-healing.

Dr. Henry Ealy helps his patients to do this with a 14-day regime. And uses water fasting (with nutrients) to successfully activate autophagy.

This water fast is instead of it just being water only, we used water with the key nutrients. We could use these nutrients, L-arginine, serrapeptase, and glutathione. We could use them because they were zero calories. So they weren't going to turn off autophagy. That's when you know your body's in fasting mode, you know your body's in self-healing mode when it's hungry. That's the key sign that people have to be hungry, right?

America Out Loud, it'll take you to all the podcasts, and you can go through that and read everything.

3 days of water fasting with some nutrients, with the serrapeptase, L-arginine, and glutathione only, okay. Just very minimal nutrients, but we wanted nutrients to help break down spike protein, or at least in theory to break down the spike protein. And then that's followed by 11 days of continuing those nutrients. But now you add in the immune priming nutrients with it, the Vitamin D, Vitamin C, Vitamin A, zinc, all that stuff. You add all that in, along with the L-arginine and the serrapeptase and everything, and she added all that into it, along with organic plant-based nutrition.

Using 72-hour water fasting plus fasting nutrients. So let's go see what those fasting nutrients are: L-arginine, liposomal glutathione or N-acetyl cysteine, serrapeptase, and liquid iodine. Those are the fasting nutrients.

. So using the L-arginine, which is 1,000 milligrams twice a day, and then liposomal glutathione, which is 250 milligrams per day. And serrapeptase, which is 80,000 SPU,

SUING FDA for MISLEADING ON IVERMECTIN

The Association of American Physicians and Surgeons (AAPS) filed its [motion](#) and [amicus brief](#) Thursday evening with the federal district court in Galveston urging it to allow the lawsuit to proceed against the FDA for its misleading statements against ivermectin. In *Apter v. HHS*, a group of physicians sued to hold the Food and Drug Administration, a federal agency within the Department of Health & Human Services (HHS), accountable for its interference with physicians' ability to treat Covid-19.

“Defendant FDA has improperly exploited misunderstandings about the legality and prevalence of off-label uses of medication, in order to mislead courts, state medical boards, and the public into thinking there is anything improper about off-label prescribing,” AAPS writes in its amicus brief to the court. “Not only is off-label prescribing fully proper, legal, and commonplace, but it is also absolutely necessary in order to give effective care to patients.”

Yet the FDA published multiple statements and sent letters to influential organizations to falsely disparage ivermectin, implying that it was not approved for treating Covid-19. Many, including courts and state medical boards, were misled by the FDA into thinking that its lack of approval for this treatment meant that ivermectin should not be used to treat Covid-19.

“It has never been proper for the FDA to interfere with that essential part of the practice of medicine, and the FDA knows it,” AAPS informed the court. The FDA “insisted and continues to insist on interfering with the prescription of this safe medication by physicians in treating Covid-19,” AAPS added.

AAPS General Counsel Andrew Schlafly pointed out to the court that the FDA “has engaged in a campaign of interference with the proper use by physicians of ivermectin, which has long been approved as fully safe for human use.” He alerted the court that once the FDA approves a medication as safe, then physicians have full authority to prescribe it to treat any illness, particularly a novel virus like Covid-19.

The [Association of American Physicians and Surgeons \(AAPS\)](#) is a national organization representing physicians in all specialties since 1943. Its motto is *omnia pro aegroto* (everything for the patient).

A Mom's Research Updated 1/2023 on the Covid-19 Vaccine Including Post Protocols

“Intellectual freedom is essential to human society:

Freedom to obtain and distribute information, freedom for open minded and unfearing debate, freedom from pressure from officialdom for freedom of thought.”

- Russian dissident Andre Sakharov

Why I am writing this:

Love is the greatest of all things. It is what drives us, moves us, comforts us and soothes us. This paper is written with my heart, with love and even a few tears. We are in such a difficult time, searching for answers to get out of it. Freedom of speech and freedom of thought are a crux of our great nation. It helps us make decisions. Someone passed on information to me. I was so glad to receive it in making such important decisions. I wanted to pass on information to you.

With care, love and prayers for your decisions,

A mom, who is also a daughter

(Also, I am writing this with concern as voices are being suppressed and slandered. I saw this beginning over 5 years ago and thought it was bad then, but it seems tremendously worse now.)

Please note there are many links in this document. Because of the extreme increase in censorship, DuckDuckGo is a good search engine that may have links others don't and it protects searcher's privacy.

For me it started with friends sending me this presentation below. What I find most critical and urgent in the presentation is her information on the experimental COVID vaccine. The links are here with a 3 points summary below and more detailed points later. Her information is from 10 doctors with combined over 100 years of experience working for a month gathering information. (White paper link includes research backup links.)

White paper by 10 doctors. <https://img1.wsimg.com/blobby/go/99d35b02-a5cb-41e6-ad80-a070f8a5ee17/SMDwhitepaper.pdf>

Presentation on white paper: [The Stand: the vaccine for COVID-19 is experimental.](#)

Below, this (5 min) video below is a good data point to know about. (Note subtitles at times.)

PREVIOUS TESTING ON CORONAVIRUS VACCINE

Robert F. Kennedy Jr. and Del Bigtree on how research testing was tried for 12 years for a Coronavirus vaccine, but it was unsuccessful and fatal.

[The Coronavirus Vaccine Uncensored | Robert F. Kennedy Jr. & Del Bigtree](#) (Removed)

New Link: <https://www.bitchute.com/video/YGQxiadnDLuR/>

Trump was at 900,000 vaccines a day, Biden is planning on 1 million vaccines a day; 100 million in his first 100 days or one third the population of US.

A Mom's Research Updated 1/2023 on the Covid-19 Vaccine Including Post Protocols
Three Summary Points from first video listed and the white paper:

Point 1 – **The vaccine is experimental, because there is no long-term data.**

The COVID vaccine is NOT approved as a finished vaccine by FDA but only as investigative = experimental (even though called a vaccine, it is an experimental vaccine).

The experimental COVID vaccine has no long-term data and, therefore, should not be pronounced safe and effective. That has always been standard medical practice. Normally a vaccine takes 5-15 years to be approved. More information page 16.

Point 2 – **The long-term data on vaccine attempts for SARS-CoV-1, that is 78% the same as SARS-CoV-2 (COVID-19), was a tremendous failure and even fatal.** At first things look good and immunity is built, but there was “antibody dependent enhancement” or “pathogen priming” where the antibodies keep building and it caused the animals (and humans with dengue fever – more on pg. 20) to get the sickness (coronavirus) more severe than if they have not had the vaccine and can be suddenly fatal.

(FYI - **There is also concern based on how it works with the placenta that it may cause infertility again longer term.** CDC (Jan 29) is reporting 13 miscarriages from the vaccine.) **No pregnant women were in the trials.** More information below.

From White Paper: (link above)

Is the vaccine safe?

Vaccine safety requires proper animal trials and peer-reviewed data, neither of which has occurred during operation warp speed. This is especially concerning considering the fatal failure of prior coronavirus vaccine attempts such as SARS-CoV-1, the virus that is 78% identical to SARS-CoV-2 (COVID-19). Prior coronavirus (and other respiratory) vaccines have failed due to the scientific phenomena known as pathogenic priming that makes the vaccine recipient *more* likely to suffer a sudden fatal outcome due to massive cytokine storm when exposed to the wild virus. In addition to pathogenic priming there are three other potential safety issues that are being minimized. While we are hopeful that the vaccine is both effective and safe, hope is not science. Because these experimental vaccines have *not* been tested in accordance with the usual standards, we have serious concerns about safety.

Is AFLDS suggesting that the COVID vaccine is unsafe?

No. We are saying that *by definition* it is unsafe to widely distribute an experimental vaccine, because taking a vaccine is completely different than taking an ordinary medication. In contrast to taking a medication for an actual disease, the person who takes a vaccine is typically completely healthy *and would continue to be healthy without the vaccine*. As the first rule of the Hippocratic Oath is: do no harm, vaccine safety must be *guaranteed*. That has not yet happened. More studies of the vaccine's safety and efficacy should be conducted and published, and more transparency about possible risks provided to the public before Americans enter the largest experimental medication program in our history.

Quote from above: “Vaccine safety must be guaranteed.”

The outline is like a list of concerns:

Brand New Technology
Failure of Previous Coronavirus Vaccines
No Animal Studies
Known Complications
Unknown Complications
Pharmaceutical Companies are Immune from All Liability
An Experimental Vaccine is Not Safer than a Very Low IFR
No Proof the Vaccine Stops Transmission of the Virus
Unknown Mortality or Hospital Admission Benefit
The Vaccine Lasts Unknown Duration
The Data Has Not Been Independently Peer-Reviewed & Published

Infertility long term unknown ([13 miscarriages as of Jan 29 more detail on this below](#))

from white papers again below

The mechanism of action of the experimental mRNA vaccines includes a possible autoimmune rejection of the placenta. In layman's terms, the vaccine may permanently interfere with a woman's ability to maintain a pregnancy. The vaccine companies themselves acknowledge the possibility of ill effects on a pregnancy on the vaccine bottle, which says the following: "it is unknown whether COVID-19 mRNA VaccineBNT162b2 has an impact on fertility. And women of childbearing age are advised to avoid pregnancy for at least two months after their second dose."30

Dr. Wolfgang Wodarg and Dr. Michael Yeadon, the former head of Pfizer research, filed an emergency [STAY OF ACTION](#) with the European Medicines Agency trying to prevent the experimental COVID mRNA injections from being used on the public as guinea pigs.

Excerpt from above: STAY (of COVID vaccine) URGENTLY REQUIRED I. Petitioner and many EU residents/citizens will suffer irreparable harm because once the EMA approves the COVID- 19 vaccine(s) in question, both governments of EU member states and employers in the EU are most likely going to recommend them for widespread use, and hence without the EMA assuring proper safety trials of the vaccines now, the Petitioner and others will not have the opportunity to object to receiving the vaccine based on deficient clinical trials later. II. Furthermore, if the vaccines are licensed without an appropriate efficacy review and without improving the accurate determination of primary endpoints, then any potential acceptance or mandate of these vaccines are likely to be based on inaccurate beliefs and data about the vaccines, namely that they will or might stop transmission of the virus from the vaccine recipient to others and/or that it will reduce severe COVID-19 disease and deaths. The trial protocols in question are not currently properly designed to determine whether either of those objectives can be met.

Do we want ourselves or loved ones to be in a human experimental medical trial? What is known as being a guinea pig. This is experimental. At minimum shouldn't we wait and watch results long term? Even if one takes the vaccine, Fauci and others are saying it is not known if the vaccine will decrease transmission so we will NOT get to stop wearing masks etc. or travel. - AND there are safe alternatives.

Point 3 - **There are other safe preventatives and effective treatments with known long-term safety for decades.**

With natural immunity and these available safe and effective treatments – there is no need to take the vaccine.

Budesonide has been proven 90% effective! <https://budesonideworks.com/validation/>

Ivermectin results had 100% effective preventative for healthcare workers.

[Dr. Pierre Kory before Senate hearing on Ivermectin](#) Ivermectin is decades long known safe.

These treatments and others have not been used to the extent they should so far on COVID. How many deaths could have been prevented with these early treatments or even used when patients are severely ill? One reason these treatments have not been used may be political. Another reason could be because the information is being suppressed. But one of the main reasons may likely be, with the disease being new, the NIH had recommended staying home until the patient was really sick and needed to be hospitalized. The Association of American Physicians and Surgeons states:

“The current NIH guidelines convey therapeutic nihilism by recommending NO specific treatment until shortness of breath requires hospitalization. Ethical practicing physicians reject the fatalistic NIH recommendations.” See following for flyer that this quote came from.

Copy of the Association of American Physicians and Surgeons COVID-19 Protocol Flyer [HERE](#) These treatments work better the earlier taken, although they do work with success even for patients in severe cases.

More Detail:

Budesonide, inexpensive, readily available, and a very safe treatment used for asthma for years, has been found 90% effective! **Most recent study by Oxford University**

<https://www.ox.ac.uk/news/2021-02-09-common-asthma-treatment-reduces-need-hospitalisation-covid-19-patients-study> **<https://budesonideworks.com/validation/>**

<https://www.bitchute.com/video/FHTyW1dGLsBK/> **Must Watch 22 min Budesonide**

The information in the clip above is important for anyone even if they have had the vaccine since it does not prevent COVID and it is important to know effective treatment if one does get ill or a loved one gets ill. Also the information on early treatment in the AAPS Flyer above is important to know. People may want to have things from AAPS Flyer on hand or even take preventively when traveling or seeing family

Ivermectin

[Dr. Pierre Kory before Senate hearing](#) (REMOVED) This link should be watched in its entirety. It shows how successfully and safely something used for decades has worked.

Here are studies of what has been found to help: Click link. Click top bar or hover at bottom of chart to scroll to more pages.

[Latest International Testing](#) This shows worldwide testing updated. One can click on HCQ or Vit D or Ivermectin or Remdesivir... Click on top bar for each.

Hover near the bottom of the first picture and click the arrow to go to the next slides.

Going back to the first mentioned white paper and COVID presentation (links: Pg.1)

My Notes: (These are my notes on the white paper and presentation. I am not a medical physician.) (Above was a point summary and this is a bit more detail.)

1. This is brand new technology never used before (not a normal vaccine) - mRNA technology. This has NOT been approved as a vaccine. It is experimental. It is in the investigation stage only. (Do you want to be the first one to take brand new things when it comes to medicine?) (Johnson & Johnson discussed at the end of the report, but almost all issues are the same as there is still potential of antibody dependent enhancement, no long term data, etc.)
2. There has been a tremendous failure of previous attempts at coronavirus vaccines. SARS-CoV 1 is 78% the same as SARS-CoV 2, which is another name for COVID-19. Prior attempts in animals for the first shot and the second shot went fine, but then when the animals were released in the wild, they later died of the “COVID” disease - SARS-CoV 1 that they had had the vaccine for. This is due to antibody dependent

A Mom's Research Updated 1/2023 on the Covid-19 Vaccine Including Post Protocols

enhancement where the mRNA continues building antibodies and instead of the immunity desired long term, it has the alternate effect where you are more susceptible to the disease, where it could be worse for you (even death) than if you have not had the vaccine.

3. There are no independently published data on animal studies. (except for previous studies mentioned above for SARS-CoV 1, which is 78% the same as COVID-19 (also called SARS-CoV 2). The animals died in the previous studies on SARS-CoV 1, although fine after a few months with the two shots.
4. Known possible complications – antibody dependent enhancement or immune enhancement or pathogenic priming - mentioned above.
5. The companies doing the trials and making the vaccine are given immunity.
6. **For women of child-bearing age, the vaccine may cause infertility.**
7. There are a lot of things we simply don't know. Do you want to take an experimental vaccine where you do not know long term? 3-7 months does not give us long term data.
8. If you have a disease you are willing to take a drug to get rid of it, but to give something experimental to all the healthy people is very risky.

"People ask me if I am going to get the vaccine and would I recommend my children take the vaccine. I say it is really irrational to take a brand new, untested, untried technology, when on the other hand, I have a drug that is 65 years old, it has been given billions of times and it is completely safe for all age groups." - Dr. Simone Gold

Recommendation by American Frontline Doctors by age group on getting the vaccine

<u>Ages</u>	<u>Recommendation</u>
0 to 20	Prohibit
20 to 50	Strongly Discouraged/Prohibit
50 to 70	Strongly Discouraged/Discouraged if other health
70 and above	Personal Risk Assessment

Information from CDC site - that I pulled Jan 28th

<u>Ages</u>	<u>Percentage not dying from COVID by age in USA*</u>
0 to 20	99.99%
20 to 50	99.97%
50 to 70	99.89%
70 and above	98.88%

*Calculated from data on CDC.gov on 1/28/2021

Percentage of COVID Deaths over 65 and over 75 of total COVID Deaths

People age 65 and over make up 81% of all deaths from COVID*

People age 75 and over make up 60% of all deaths from COVID*

*Calculated from data on CDC.gov on 1/28/2021

A Mom's Research Updated 1/2023 on the Covid-19 Vaccine Including Post Protocols

Death by Age Group

Data as of 1/27/2021		
65-and-over age group	45-64 age group	Under 45 age group
81.1% (291,429 deaths)	16.4% (58,791 deaths)	2.5% (9,132 deaths)

Only 6% of deaths of COVID have no other co-morbidities according to this chart from CDC.

Most Frequently Listed Comorbidities with COVID-19 Deaths

Data as of 1/24/2021		
Influenza & Pneumonia	Hypertension	Diabetes
43.5% (153,620 deaths)	19.8% (69,942 deaths)	15.6% (54,928 deaths)
Alzheimer disease and other Dementias	Sepsis	
14.8% (52,091 deaths)	9.0% (31,912 deaths)	
NOTE: There were co-morbidities or other conditions listed on the death certificate in 94% of all COVID-19 deaths (Table 3, Week 50). The 6% of death certificates in which COVID-19 was the only condition listed was likely related to a lack of detail listed about other conditions present at the time of death.		

See NOTE at bottom of chart below. With the combination of 81% dying of COVID over 65 and 94% dying from COVID having co-morbidities, therefore for anyone under 65, COVID-19 is a very low risk, especially compared to the untried, untested long-term vaccine. A case could be made that numbers dying from COVID were inflated in that it includes those who would pass away anyway at that time of something else. Dr. Deborah Birx stated as such: https://www.realclearpolitics.com/video/2020/04/08/dr_birx_unlike_some_countries_if_someone_dies_with_covid-19_we_are_counting_that_as_a_covid-19_death.html#!

At Tuesday's White House coronavirus press conference, task force member Dr. Deborah Birx said that while some countries are reporting coronavirus fatality numbers differently, in the U.S. you are counted as a victim of the pandemic if you die while testing positive for the virus, even if something else causes your death.

Why this is important is if the numbers are inflated there is even less need to take the vaccine that either has no long-term data or 78% same Coronavirus data in long-term studies that were tremendous failure including fatal where later many vaccinated ended up with a more severe case of the coronavirus they were vaccinated for. It was better not to be vaccinated.

SAFE ALTERNATIVES

There are safe alternatives. Good overall video below on how early treatment (not only) was not used but suppressed. Peter McCullough, MD testifies to Texas Senate HHS Committee <https://youtu.be/QAHi3IX3oGM>

BUDESONIDE

Budesonide, inexpensive, readily available, and a very safe treatment used for asthma for years, has been found 90% effective! **Most recent study by Oxford University**
This can keep you out of the hospital and prevent a ventilator.

<https://www.bitchute.com/video/FHTyWldGLsBK/> Must watch Link

<https://budesonideworks.com> From website:

(See [Medical Disclaimer](#))

If you need to find a provider for the protocol, go to the [Providers page](#).

If you are a doctor who wants proof of the protocol, read the studies and articles on the [Validation page](#) and read or watch the doctor and patient testimonials on the [Stories page](#).

If you want to download the full protocol to give to your doctor, you can find it [here](#).

VITAMIN D3

Vitamin D3 is strongly recommended to prevent Coronavirus as 80% of severe patients have low Vitamin D. One needs to be taking a regular dose. [Latest International Testing](#)

Dr. Ryan Cole VERY GOOD SUMMARY of Covid and encourages Vitamin D

<https://www.bitchute.com/video/hfzL5gUeQvvr/>

Association of American Physicians and Surgeons COVID-19 Protocol Flyer [HERE](#)

HYDROXYCHLOROQUINE

In an unprecedented situation, false studies in the top major medical journals were retracted on hydroxychloroquine (HCQ). It is basically unprecedented to have false studies get in these journals and unprecedented to have things retracted from them. The CDC (and main stream media) have not updated their information on hydroxychloroquine to reflect that.

Top medical journals, including the Lancet, as never happens, retracted the article saying HCQ was not effective as the test was fraudulent:

[https://www.thelancet.com/journals/lancet/article/PIIS0140-6736\(20\)31180-6/fulltext](https://www.thelancet.com/journals/lancet/article/PIIS0140-6736(20)31180-6/fulltext)

One recommendation for safe alternative is Hydroxychloroquine (HCQ) and Zinc as there are many studies proving it is effective and safe as preventative and/or treatment.

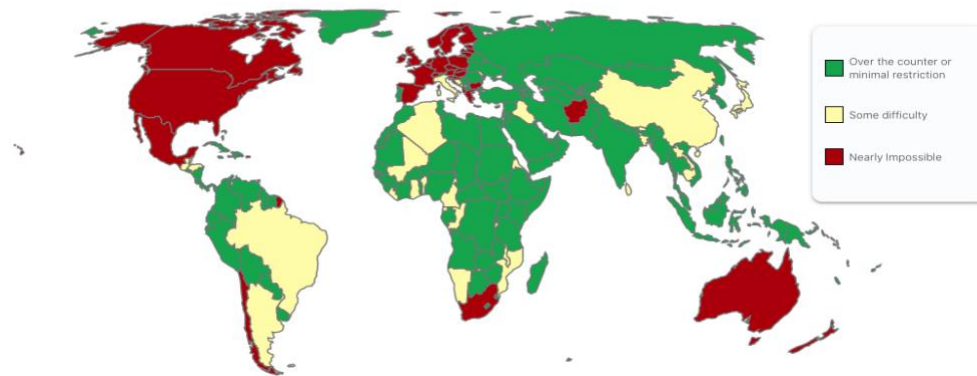

[Latest International Testing](#)

Millions of people have taken Hydroxychloroquine safely over 65 years.

In the continent of Africa many take HCQ once a week to prevent malaria. Those countries have low COVID-19 rates (as countries/states taking Ivermectin).

The disinformation caused a hydroxychloroquine (HCQ) lockdown in US. In the world 4.6 billion have access to HCQ, many over-the-counter. In Africa it is taken weekly by all ages for malaria. Countries taking HCQ have low COVID-19.

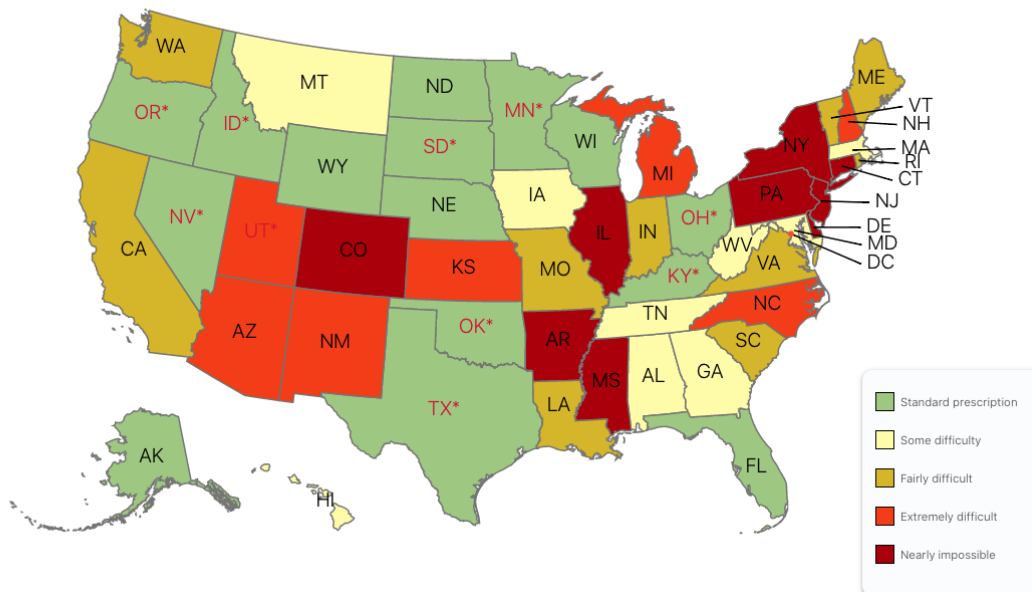

A Mom's Research Updated 1/2023 on the Covid-19 Vaccine Including Post Protocols
Worldwide Availability of HCQ (based upon
law or common practice)

Because of events in 2020 access to HCQ has been restricted in the US. (It is unprecedented to lockdown safe medication.) It is not been prescribed (with Zinc) to the extent it should to prevent COVID-19 and death from the disease. Also, you can give HCQ to the sick versus giving experimental treatment to everyone who is well or give HCQ as safe preventative dose as it has been used for 65 years safely. (See map that follows.)

LOCKDOWN Map of hydroxychloroquine (HCQ)

Options for U.S. Patients/Doctors to
Obtain/Prescribe HCQ

A Mom's Research Updated 1/2023 on the Covid-19 Vaccine Including Post Protocols IVERMECTIN

Another drug that is safe and taken for decades given to billions is Ivermectin.

Study summary:

800 health care workers using Ivermectin - none with COVID;

400 health care workers given placebo; NOT given Ivermectin - 58% got COVID.

VERY important clip below on Ivermectin:

[Dr. Pierre Kory before Senate hearing](#) (REMOVED) (This link was also near the top in the summary points.)

Recommended to watch the above link in full.

New Link: <https://covid19criticalcare.com/senate-testimony/>

[Latest International Testing](#) (link was listed earlier as well)

This link shows testing for safe alternatives around the world. Click on HCQ or Vit D3 or Ivermectin or Remdesivir...

Vitamin D3 daily dose is recommended to prevent.

(There was testing using toxic high doses of HCQ that gave false data now retracted.)

Retired – Former Pfizer Chief Science Officer:

“There is absolutely no need for vaccines to extinguish the pandemic. I’ve never heard such nonsense talked about vaccines. You do not vaccinate people who aren’t at risk from a disease. You also don’t set about planning to vaccinate millions of fit and healthy people with a vaccine that hasn’t been extensively tested on human subjects.” –

Dr. Michael Yeardon

<https://financialpost.com/financial-times/why-the-pfizer-ceo-selling-62-of-his-stock-the-same-day-as-the-vaccine-announcement-looks-bad>

PREGNANCY AND INFERTILITY

From earlier in the document:

Infertility long term unknown (13 miscarriages as of Jan 29 more detail on this below)

(775 miscarriages by June 25 per CDC)

(As noted the Harvard study showed 1% of vaccine reactions reported.)

from white papers again below

The mechanism of action of the experimental mRNA vaccines includes a possible autoimmune rejection of the placenta. In layman's terms, **the vaccine may permanently interfere with a woman's ability to maintain a pregnancy.** The vaccine companies themselves acknowledge the possibility of ill effects on a pregnancy on the vaccine bottle, which says the following: "it is unknown whether COVID-19 mRNA

A Mom's Research Updated 1/2023 on the Covid-19 Vaccine Including Post Protocols
VaccineBNT162b2 has **an impact on fertility**. And women of childbearing age are advised to avoid pregnancy for at least two months after their second dose.”³⁰

Email on Miscarriages

It is not known if the vaccine could cause long-term infertility based on how it affects the placenta.
(VAERS # in email from CDC website of vaccine adverse reactions)

What my friend wrote:

I'm truly shocked a doctor who is pregnant would get the vaccine, and this is not the only woman who has suffered a miscarriage the after getting the vaccines.

Please alert your female friends of childbearing years to be so cautious and wise, even if their doctors recommend something. The MSM has suppressed so much information by highly credentialed doctors. According to Dr. Sherri Tenpenny, we won't know the full reaction to the vaccine for up to a year or so.

Remember the vaccine is experimental, does not stop transmission and the pharmaceutical companies are not liable. Email follows on next page

Wisconsin Resident Doctor has Miscarriage 3 Days After Being Injected with Experimental COVID mRNA Shot

February 10, 2021 2:56 pm

Dr. Sara Beltrán Ponce graduated from the Medical College of Wisconsin in 2019. She is completing her residency in Radiation Oncology at the same Milwaukee college. Her profile on a website called SheMD says she is “passionate about medical education, public health, and mentorship, particularly for women interested in radiation.” She is married with one daughter and had another child on the way – until yesterday. Dr. Beltrán Ponce tweeted on January 28 that she is 14 weeks pregnant and “fully vaccinated.” She repeated many of the most common talking points related to COVID-19 and vaccines in the tweet chain. She tweeted an update about her pregnancy less than a week later, stating that she had a miscarriage. The miscarriage happened at 14 1/2 weeks, indicating it was three days after she got the first or second mRNA shot. As you can see from Dr. Sara Beltrán Ponce's update tweet announcing the death of her unborn baby, she didn't dare connect it to the COVID injection, because to do so would have probably shipwrecked her career as a medical doctor, because she would have been labeled as an "anti-vaxxer" and therefore "anti-science."

by **Brian Shilhavy**
Editor, Health Impact News

The COVID Blog, part of *COVID Legal USA* which is “a team of paralegals, legal writers and researchers helping Americans represent themselves in legal matters against oppressive, dangerous COVID mandates,” has reported on the miscarriage of a Wisconsin doctor shortly after receiving one of the experimental COVID mRNA injections.

Dr. Sara Beltrán Ponce graduated from the Medical College of Wisconsin in 2019. She is completing her residency in Radiation Oncology at the same Milwaukee college. Her profile on a website called SheMD says she is “passionate about medical education, public health, and mentorship, particularly for women interested in radiation.” She is married with one daughter and had another child on the way – until yesterday.

Dr. Beltrán Ponce tweeted on January 28 that she is 14 weeks pregnant and “fully vaccinated.” She repeated many of the most common talking points related to COVID-19 and vaccines in the tweet chain.

She tweeted an update about her pregnancy less than a week later *(NOTE: There is a narrative on social media channels about some sort of “fake photo” in Dr. Beltrán Ponce’s tweets. The narrative appears to attempt discrediting the story or deflecting from the facts. We’ve linked the internet archives herein for readers to see the actual tweets and screenshots).*

A Mom's Research Updated 1/2023 on the Covid-19 Vaccine Including Post Protocols

The miscarriage happened at 14 1/2 weeks, indicating it was three days after she got the first or second mRNA shot. She did not say if it was the Pfizer or Moderna shot. Dr. Beltrán Ponce has since locked her Twitter account so only verified followers can see her tweets. ([Full article.](#))

In searching through the CDC Vaccine Adverse Event Reporting System (VAERS), I found a few other reported cases of miscarriages so far just after receiving the Pfizer experimental COVID shot. One of them, in California, was also a doctor.

VAERS ID: [918034](#)

Write-up: I was 28 weeks and 5 days pregnant when I received the first dose of the COVID19 vaccine. Two days later (12/25/2020 in the afternoon), I noticed decreased motion of the baby. The baby was found to not have a heartbeat in the early am on 12/26/2020 and I delivered a 2lb 7oz nonviable female fetus at 29 weeks gestation. I was 35 years old at the time of the fetal demise and the only pregnancy history for this pregnancy included a velamentous cord insertion that was being closely monitored by a high-risk OB. My estimated due was March 12, 2021.

VAERS ID: [958755](#)

Write-up: Pt was 18 weeks pregnant at the time of the vaccine. Second pregnancy. Pt is a physician. Pregnancy was entirely normal up to that time. On 1/18/2021, she began to have heavy vaginal bleeding probably due to a placental abruption and subsequently delivered at 18 weeks. Baby was stillborn. Ultrasound done 1/15/2021 normal. Lethal event for the fetus. The patient did well.

VAERS ID: [967274](#)

Write-up: I was pregnant and my baby died two days after I took it and I got really sick. As we have previously reported, when the UK issued its emergency use authorization (EUA) for the Pfizer COVID mRNA injection, they recommended that pregnant women NOT get the jab. They also recommended that nursing mothers and women planning on becoming pregnant to wait at least two months.

The FDA in the United States, however, issued no such warnings when they issued an EUA for the same experimental Pfizer COVID mRNA injection. See:

[Unlike UK, U.S. FDA Allows Pregnant and Nursing Women to Receive Experimental Pfizer COVID Vaccine](#)
Dr. Wolfgang Wodarg and Dr. Michael Yeadon, the former head of Pfizer research, filed an emergency [STAY OF ACTION](#) with the European Medicines Agency trying to prevent the experimental COVID mRNA injections from being used on the public as guinea pigs.

One of Dr. Yeadon's primary concerns was that the experimental jabs would cause infertility. He wrote that these injections are still in Phase III trials and are:

expected to induce the formation of humoral antibodies against spike proteins of SARS-CoV-2. Syncytin-1 (see Gallaher, B., "Response to nCoV2019 Against Backdrop of Endogenous

A Mom's Research Updated 1/2023 on the Covid-19 Vaccine Including Post Protocols

Retroviruses” – <http://virological.org/t/response-to-ncov2019-against-backdrop-of-endogenous-retroviruses/396>), which is derived from human endogenous retroviruses (HERV) and is responsible for the development of a placenta in mammals and humans and is therefore an essential prerequisite for a successful pregnancy, is also found in homologous form in the spike proteins of SARS viruses.

There is no indication whether antibodies against spike proteins of SARS viruses would also act like anti-Syncytin-1 antibodies. However, if this were to be the case this would then also prevent the formation of a placenta which would result in vaccinated women essentially becoming infertile.

To my knowledge, Pfizer/BioNTech has yet to release any samples of written materials provided to patients, so it is unclear what, if any, information regarding (potential) fertility-specific risks caused by antibodies is included.

According to section 10.4.2 of the Pfizer/BioNTech trial protocol, a woman of childbearing potential (WOCBP) is eligible to participate if she is not pregnant or breastfeeding, and is using an acceptable contraceptive method as described in the trial protocol during the intervention period (for a minimum of 28 days after the last dose of study intervention).

This means that it could take a relatively long time before a noticeable number of cases of postvaccination infertility could be observed. ([Source](#).)

As you can see from Dr. Sara Beltrán Ponce's update tweet announcing the death of her unborn baby, she didn't dare connect it to the COVID injection, because to do so would have probably shipwrecked her career as a medical doctor, because she would have been labeled as an “anti-vaxxer” and therefore “anti-science.”

A Mom's Research Updated 1/2023 on the Covid-19 Vaccine Including Post Protocols

Email from Texas Senator Bob Hall

Capitol Hall Report - COVID Therapeutics Kit

Notes from those sending the email:

I thought it important to note what Senator Hall says: "with confidence in efficacy of the vaccines declining daily"

It is important to let our friends know as they are giving out 1 million vaccines a day. There are other SAFE, KNOWN options. per what was sent below. I love how he says - Let's take the "Offensive Strategy" Great safe options click the highlighted link [HERE](#)

A copy of the AAPS COVID-19 Protocol Flyer can be found [HERE](#).

Excerpt here:

"Substantial worldwide evidence reveals multiple treatment options. Physicians worldwide are prescribing therapies that are effective at reducing hospitalization and death from COVID-19. They have reason to be hopeful based on the clinical experience and studies. The current NIH guidelines convey therapeutic nihilism by recommending NO specific treatment until shortness of breath requires hospitalization. Ethical practicing physicians reject the fatalistic NIH recommendations. The following stages of treatment have been studied and expert scientific opinions support treatment at these stages prior to hospitalization."

Here is an email from Texas State Senator Bob Hall that gives us ideas of what to take to prevent Covid...or perhaps a worse case of it, if we get it. He provided personal COVID kits for each of the other State Senators. Everyone should be on vitamin D3 daily dose as 80% of severe Covid patients were low in Vitamin D3.

Subject: Capitol Hall Report - COVID Therapeutics Kit

From Senator Hall

Our "Defensive Only Strategy" has allowed COVID-19 to kill too many people. **The masks, lockdowns, and isolation policies are unnecessarily destroying our economy. And, with confidence in the efficacy of the vaccines declining daily**, it is far past time we switched from a "Defensive Strategy" to an "Offensive Strategy". We can make this switch **by following the recommendations of the Association of American Physicians and Surgeons (AAPS) COVID-19 Preventative and Early Protocols.**

We are so convinced of the effectiveness of these protocols that, today, we gave each of the Texas Senators a personal "COVID-19 Combat Kit" which included at least a month's supply of vitamin C, vitamin D3, Zinc, Quercetin, and the AAPS instructional flyer.

A copy of the AAPS COVID-19 Protocol Flyer can be found [HERE](#).

Text below from the note to the Senators I described in this [video](#):

"Senator

I hope you will find this COVID prevention therapeutics kit as comforting as I did. This kit is based on the recommendations of the Association of American Physicians and Surgeons (AAPS). It is similar to the kits being distributed internationally by several countries like Costa Rica, India and Honduras to their citizens. The effectiveness of which is confirmed by their death rate being only a small fraction of that which we have had in the USA and Texas.

I have worked with the frontline clinical doctors who developed these protocols since last May and know, firsthand, their effectiveness.

I am not a doctor and I am not offering medical advice. I simply want to share with you what I am doing for myself and my family because I know that there is a large part of the medical community that wants us to think that the only things you can do are wear masks, socially distance and isolate.

Please know that I have sent this therapeutics kit to you because I genuinely care about you and all of my fellow legislators. I want us to have a safe and successful session that is as near to normal as possible.

May God continue to bless you.

p.s. If you have achieved COVID immunity, feel free to pass this on to a loved one."

It is past time to return to the principles of life, liberty, individual pursuit of happiness, and personal responsibility to the people. It is time for the government to return to governing and not ruling. We have good offensive solutions to combat COVID-19. **It should be obvious to everyone that it is well past time for Texans to get back to the "old normal" and stop being forced to accept a "new normal."**

HOW LONG TO DEVELOP VACCINE

How long usually to develop a vaccine on Google shows 10 to 15 years or 5 to 10 years.

Per below:

Vaccine Development, Testing, and Regulation | History of ...

Vaccine development is a long, complex process, often lasting 10-15 years and ... They may also do challenge studies with the animals, meaning that they vaccinate ... Once the IND application has been approved, the vaccine is subject to three ... It would take almost a year to analyze the results and determine whether the ...

news.ncsu.edu › vaccine-manufacturing-q-and-a

Vaccine Q&A: How Long Does It Take to Make Vaccines? | NC ...

Dec 16, 2020 — But it traditionally has taken 5-10 years to get a new vaccine. ... and approved, we could generalize and say that one batch of vaccine, consisting ... TA: How long will it take manufacturers to scale up production once a vaccine ...

The COVID testing to arrive at 95% effective was in Pfizer's case originally 28 days definitely under 3 months. One complaint is that later data of comparison to show how many in the trials that have since had COVID is not being either released or perhaps not being tested. From the trials it did show you can still get COVID if you have had the vaccine.

EXAMPLES of THINGS BELIEVED GOOD FOR HEALTH that were NOT SO LATER

Here are a few examples of things everyone in the world or a large group took as healthy or safe and effective that later turned out not to be good for you or caused or worsened the problem they were said to fix and, in some cases, even deadly.

DIET SODA

The Coca-Cola Company introduced Diet Coke to great fanfare in **1982**, following another low-calorie cola called Tab that was produced in **1963**.

A growing body of evidence suggests that **diet soda** consumption correlates with an increased risk of a wide range of medical conditions, notably: heart conditions, such as heart attack and high blood pressure. metabolic issues, including diabetes and obesity. brain conditions, such as dementia and stroke. Jul 31, 2019 Google

People were not told about these problems in 1982 or even later. Diet sodas were marketed to keep weight off, and yet actually caused obesity.

A 2015 study in the Journal of the American Geriatrics Society found that diet soda drinkers age 65 and older actually gained triple the abdominal fat compared to their peers who didn't consume the drink.

A 2016 study published in JAMA Pediatrics examined more than 3,000 pregnant women and their infant children one year after birth. Mothers who drank diet soda were two times more likely to have obese and overweight children.

The researchers behind a 2017 study gathered data that indicated a link between diet soda and the risk of stroke and Alzheimer's disease. The study involved 2,888 people over the age of 45 years.

OPIOIDS

How did the opioid epidemic become the nation's deadliest crisis?

Back in the early 90s, The Joint Commissioner advocated for pain to become the 5th vital sign. This prompted physicians and pharmaceutical companies to find a solution for patients suffering from chronic pain. **Once the so-called miracle drug OxyContin was approved by the FDA, master marketing campaigns and false research ensured**

A Mom's Research Updated 1/2023 on the Covid-19 Vaccine Including Post Protocols

that every patient had access to these narcotic pain killers. In 2012, there was a bottle of OxyContin for every adult American. That's over 259 million prescriptions floating around, available for diversion and misuse by the general population.*

https://www.shatterproof.org/blog/10-things-you-need-know-about-opioid-epidemic?gclid=CjwKCAiAp4KCBhB6EiwAxRxbpNm4rx9EeBrDs4zh4bh-w_o5V3dHwXLiOwlmtNnBDa0_I AptgIHxXR0CX-0QAvD_BwE

Mayo Clinic:

The opioid crisis that exists today developed over the past 30 years. The reasons for this are many. Good intentions to improve pain and suffering led to increased prescribing of opioids, which contributed to misuse of opioids and even death. Following the publication of a short letter to the editor in a major medical journal declaring that those with chronic pain who received opioids rarely became addicted, prescriber attitude toward opioid use changed. Opioids were no longer reserved for treatment of acute pain or terminal pain conditions but now were used to treat any pain condition. Governing agencies began to evaluate doctors and hospitals on their control of patients' pain. Ultimately, reimbursement became tied to patients' perception of pain control. As a result, increasing amounts of opioids were prescribed, which led to dependence. When this occurred, patients sought more in the form of opioid prescriptions from providers or from illegal sources. Illegal, unregulated sources of opioids are now a factor in the increasing death rate from opioid overdoses. Stopping the opioid crisis will require the engagement of all, including health care providers, hospitals, the pharmaceutical industry, and federal and state government agencies

[https://www.mayoclinicproceedings.org/article/S0025-6196\(17\)30923-0/pdf](https://www.mayoclinicproceedings.org/article/S0025-6196(17)30923-0/pdf)

THALIDOMIDE

After 60 years, scientists uncover how thalidomide produced birth defects

More than 60 years after the drug thalidomide caused birth defects in thousands of children whose mothers took the drug while pregnant, scientists at Dana-Farber Cancer Institute have solved a mystery that has lingered ever since the dangers of the drug first became apparent: how did the drug produce such severe fetal harm? Just as the drug's effect in the womb seems totally random, so too was the compensation received.*

<https://www.dana-farber.org/newsroom/news-releases/2018/after-60-years--scientists-uncover-how-thalidomide-produced-birth-defects/#:~:text=The%20result%20is%20the%20spectrum,from%20reports%20in%20medical%20literature.>

<https://helix.northwestern.edu/article/thalidomide-tragedy-lessons-drug-safety-and-regulation> (REMOVED)

Thalidomide first entered the German market in 1957 as an over-the-counter remedy, based on the maker's safety claims. They advertised their product as "completely safe" for everyone, including mother and child, "even during pregnancy," as its developers "could not find a dose high enough to kill a rat." By 1960, thalidomide was marketed in 46 countries, with sales nearly matching those of aspirin.

Around this time, Australian obstetrician Dr. William McBride discovered that the drug also alleviated morning sickness. He started recommending this off-label use of the drug to his pregnant patients, setting a worldwide trend. Prescribing drugs for off-label purposes, or purposes other than those for which the drug was approved, is still a common practice in many countries today, including the U.S. In many cases, these off-label prescriptions are very effective, such as prescribing depression medication to treat chronic pain.

DENGUE FEVER

As I understand it this is a mRNA vaccine on a similar like virus to Coronavirus as it is respiratory. Note how those who got the vaccine later developed a severe case of the exact illness they were vaccinate for. It was worse than if they had not had the vaccine. It was given to 700,000 schoolchildren under the age of 18 and 50,000 adults.

1. **The vaccine manufacturer, Sanofi Pasteur, announced in 2017 that people who receive the vaccine...may be at risk of developing severe dengue if they get dengue after being vaccinated.***

<https://www.cdc.gov/dengue/prevention/dengue-vaccine.html#:~:text=In%20May%202019%2C%20Dengvaxia%20AE,confirmed%20prior%20dengue%20virus%20infection.>

In April 2016, the DOH, launched the dengue vaccination campaign in Central Luzon, Calabarzon and Metro Manila, where about 700,000 individuals (my note from other sources is that these were mostly children and 50,000 adults) received at least one dose of the vaccine.[11] The government paid P3.5-billion for the vaccine.[10]

On November 29, 2017, French drugmaker Sanofi Pasteur released a statement stating that their Dengue vaccine, Dengvaxia, posed risk to individuals vaccinated without having a prior dengue infection.[12][13] This came sometime after reports circulated of children dying allegedly from complications associated with the vaccine.[5] Soon after, the Philippine Department of Health (DOH) suspended the vaccination on FCS program based in schools owing to the said concern,[14] with DOH Secretary Francisco Duque saying "In the light of this new analysis, the DOH will place the dengue vaccination on hold while review and consultation is ongoing with experts, key stakeholders and the World Health Organization." [11] On December 2, 2017, the government of Makati immediately suspended its anti-dengue vaccination drive following its statement.[15]

In its statement, pharmaceutical company Sanofi Pasteur reported concerns that Filipinos, mostly schoolchildren, could potentially be at risk of a more severe disease, where the recipient of the vaccine had not had a previous dengue infection; however, a medical director of Sanofi said that the dengue vaccination would not cause "severe dengue." [16] On December 4, 2017, Sanofi also denied that they made Filipinos into "guinea pigs," explaining that the vaccine program was conducted by the DOH and not them https://en.wikipedia.org/wiki/Dengvaxia_controversy

The link below was on page 3 of this report as well.

Robert F. Kennedy Jr. and Del Bigtree on how research testing was tried for 12 years for a Coronavirus vaccine, but it was fatal. (This 5 min link should be watched in full.)

The Coronavirus Vaccine Uncensored | Robert F. Kennedy Jr. & Del Bigtree (REMOVED)

New Link: <https://www.bitchute.com/video/RszQvMUyvkyA/>

Conclusions/Recommendations on the following page.

CONCLUSIONS/RECOMMENDATIONS

1. To me, these issues with the COVID vaccines make them dangerous and unsafe:

1. There is no long-term data. Transparency is also lacking in the data now with articles saying there are no deaths when VAERS on CDC is reporting over 1,000 and over 10,000 adverse reactions including tremors, strokes and miscarriages. The 2011 Harvard study showed only 1% of adverse reactions to vaccines are reported to VAERS.
2. The long-term data on the vaccine attempts for over a decade and millions of dollars with Coronavirus 78% the same as COVID-19 was a terrible failure with animals dying from the disease they were inoculated for, as well as, in 2017 the vaccine for Dengue fever on 700,000 (mostly school children under 18) was suspended after 18 months because those vaccinated were getting a more severe case of the very disease they were vaccinated for and 600 died. This is due to antibody dependent enhancement or pathogen priming where antibodies continue to build (no off switch) causing more susceptibility to the disease and a severe case and death. At first, meaning after the first two shots the animals and humans do great and it seems to work wonderfully until later or when exposed to the disease later. In the information in later pages on the Johnson & Johnson vaccine, antibody dependent enhancement is also a possibility there.
3. The vaccine may cause permanent infertility. (The long-term data is not there to know differently.)
4. The companies we are trusting in have a track record of prior lawsuits and are given immunity or no liability. (See next pages for Johnson & Johnson)
5. Most people have over 95% "immunity in a sense" already. (Per chart following) Too risky to give an experimental vaccine to those who are well. Safer to treat those who are sick with treatments already proven safe long-term.
6. It does not stop transmission as proven in the trials as people did get COVID.

Information from CDC site - January 28th

<u>Ages</u>	<u>Percentage not dying from COVID by age in USA*</u>
0 to 20	99.99%
20 to 50	99.97%
50 to 70	99.89%
70 and above	98.88%

*Calculated from data on CDC.gov on 1/28/2021

Percentage of COVID Deaths over 65 and over 75 of total COVID Deaths

People age 65 and over make up 81% of all deaths from COVID*

People age 75 and over make up 60% of all deaths from COVID*

*Calculated from data on CDC.gov on 1/28/2021

7. With the combination of the first chart above showing low chance of dying from COVID for all those under 70, 81% dying from COVID over 65 and 94% of them having a co-morbidity, plus as Dr. Brix said USA counted all who died with COVID (not only those who died from COVID). It does not

A Mom's Research Updated 1/2023 on the Covid-19 Vaccine Including Post Protocols

make sense for all who are well and especially for under 70 to have the vaccine with the long-term risk.

2. **There are safe, inexpensive alternatives used for decades by millions.** Early treatment before hospitalization is recommended. One can have one of the safe alternatives on hand; meaning Ivermectin or hydroxychloroquine and zinc or perhaps the asthma medication, Budesonide, to take if you test positive with COVID and feel ill. This link [HERE](#) will take you to a [copy of the Association of American Physicians and Surgeons \(AAPS\) COVID-19 Protocol Flyer](#) [HERE](#) on recommended amounts Or, if you want to wait until you get ill, find a doctor now or someone to get it from, if you do get ill. [AAPS does not agree with NIH guidelines to wait until you are having shortness of breath and need hospitalization \(calling it fatalistic\).](#) They recommend the early treatment. This also lists preventative doses to take if desired.

3. **But I want to get out of jail – travel, see friends and family and back to normal life.**

If you have already had COVID, studies are showing minimal chance of getting it again. If you have not had COVID, and would like to take a preventative dose, as in point 2 above, the recommendations of the Association of American Physicians and Surgeons (AAPS) COVID-19 Preventative and Early Protocols COVID kit are shown next page and link [HERE](#). See prevention dosages for super safe prevention to take all the time or before and while going to see friends and family. Ivermectin taken as a preventative by 800 healthcare workers 100% of them did not get COVID. The placebo given to 400 healthcare workers 58% of them got COVID. (Among many other international studies.) Used for decades and millions, perhaps billions of people safely, Ivermectin and the hydroxychloroquine and zinc listed are shown as great preventative doses to not getting COVID. If you want to see family you can take these before, during and after. Or you can just know that you can take them or budesonide if you get sick. One would not have to take them as long-term preventative unless desired. Vitamin D3 is strongly recommended to be on a daily dose as 80% of people with severe COVID had low vitamin D. Daily Vitamin C is good as well.

Even though the flyer above mentions the vaccine (IF safe), from my research, personally, I (a mom) would not recommend the vaccine in anyway.

4. **But I and my kids need to get the COVID Vaccine to stop the spread.**

People have pulled together, locked down, worn masks, lost jobs and worked hard to stop the spread. It is proven the vaccine will not stop transmission or the spread. We might hope it does some, but we should not take an IRREVERSIBLE vaccine on perhaps the chance of helping someone else. That someone else would be much better off with the long-term known safe options used by millions then anyone healthy taking this risky vaccine which may later due to antibody dependent enhancement produce too many antibodies causing those vaccinated a more severe case of the virus. The danger of antibody dependent enhancement is proven in vaccine attempts with 78% the same coronavirus as the COVID-19 today. Don't risk someone's future on this vaccine. If the other person wants the vaccine, they can take it.

If you want to choose only a few links in this paper to watch, I recommend - The Stand, reading the white paper link that corresponds with it done by 10 doctors, the 5 min one with Robert F Kennedy Jr, the link with Dr. Pierre Kory before the senate hearing on Ivermectin, and the one on budesonide entitled; This could have saved 450,000 lives. If you get COVID and feel ill remember you can get that easy asthma treatment with budesonide. It is easy to do at home and it is proven to be 90% effective keeping you out of the hospital, but effective in hospital as well.

A Mom's Research Updated 1/2023 on the Covid-19 Vaccine Including Post Protocols Association of American Physicians and Surgeons (AAPS) COVID-19 Protocol Flyer

Call your doctor to discuss treatment at first sign of symptoms.

COVID-19 EARLY TREATMENT Protocol Example

Low Risk Patients (over-the-counter drugs):

1. Elemental Zinc 50mg 1 time a day for 7 days
2. Quercetin 500mg 2 times a day for 7 days (also consider Curcumin, EGCG, and Resveratrol)
3. Vitamin D3 4,000iu to 10,000iu 1 time a day for 7 days
4. Vitamin C 1,000mg to 3,000mg 1 time a day for 7 days
5. N-acetyl cysteine (NAC) 600mg 2 times a day for 7 days
6. Rest, oral fluids and close follow up with doctor

High Risk Patients (includes prescription-only drugs):

1. Elemental Zinc 50mg 1 time a day for 7 days
2. Hydroxychloroquine (HCQ) 200mg 2 times a day for 7 days, (also consider Quercetin, EGCG, Curcumin, and Resveratrol)
3. Azithromycin 500mg 1 time a day for 5 days or Doxycycline 100mg 2 times a day for 7 days
4. Vitamin D3 4,000iu to 10,000iu 1 time a day for 7 days
5. Vitamin C 1,000mg to 3,000mg 1 time a day for 7 days
6. N-acetyl cysteine (NAC) 600mg 2 times a day for 7 days
7. Rest, oral fluids and close followup with doctor

Additional treatments customized for every patient.

1. Ivermectin 0.2 mg/kg per dose* — one dose daily, minimum of two days, continue daily until recovered (max 5 days)[†]
2. Budesonide 1mg/2cc solution via nebulizer 2 times a day for 7 days
3. Dexamethasone 6mg 1 time a day for 7 days
4. Blood thinners (e.g aspirin 325mg 1 time a day for 7 days)
5. Home Oxygen

Low risk patient: Younger than 45, no comorbidities, and clinically stable

High risk patient: Older than 45, younger than 45 with comorbidities, or clinically unstable

Note that treatment may be extended beyond 7 days by your doctor in certain situations.

Certain nutraceuticals can be taken for longer periods or even considered for longterm daily use.

The protocols presented here are largely based on those developed by Dr. Zelenko. <https://www.vladimirzelenkomd.com/>

See [C19PROTOCOLS.COM](https://c19protocols.com) for the latest treatment and prevention protocols, and links to the most current science.

THIS INFORMATION IS NOT INDIVIDUALIZED MEDICAL ADVICE.

Treatment decisions should be made between a patient and a physician.

Discuss with your doctor to individualize your therapy.

COVID-19 PREVENTATIVE* Protocol Example

Low and Moderate Risk Individuals:

1. Elemental Zinc 25mg 1 time a day
2. Vitamin D3 4,000iu to 10,000iu 1 time a day
3. Vitamin C 1,000mg to 3,000mg 1 time a day
4. Quercetin 500mg 1 time a day (also consider Curcumin, Epigallocatechin-gallate (EGCG), and Resveratrol)
5. Post exposure, add ivermectin 0.2 mg/kg on day 1 and 3[†]
6. Vaccination (when available and after speaking to your doctor).

Protocol for High Risk Individuals:

1. Elemental Zinc 25mg once a day
2. Vitamin D3 4,000iu to 10,000iu 1 time a day
3. Vitamin C 1,000mg to 3,000mg 1 time a day
4. Hydroxychloroquine (HCQ) 200mg 1 time a day for 5 days, then 1 time per week. (also consider Quercetin, Curcumin, EGCG, and Resveratrol)
5. Ivermectin 0.2 mg/kg on days 1 and 3, then one dose every 2 weeks[†]
6. Vaccination (when available and after speaking to your doctor).

*Even when not completely preventing infection, protocols like this may help reduce the risk of severe disease, hospitalization, and death.

[†]Ivermectin dosing from I-MASK+ protocol at covid19criticalcare.com.

Low risk individuals: Healthy people under age 45. Moderate risk individuals: healthy but have high potential viral-load exposure. High risk individuals: Over age 45, or have comorbidities.

How can I obtain these medications and supplements?

Many of the recommended nutraceuticals can generally be easily purchased over-the-counter. Talk to your doctor about prescribing ivermectin and hydroxychloroquine. Lists of physicians and telemedicine options familiar with these protocols are available at c19protocols.com (click facilities tab).

What about COVID-19 vaccines?

Vaccines are becoming available. If shown to be safe and effective, they should be widely and efficiently disseminated to all who give informed consent. But as long as COVID and other life-threatening viruses are a threat, we need a strong immune system and early treatment.

THIS INFORMATION IS NOT INDIVIDUALIZED MEDICAL ADVICE. These medicines and nutraceuticals are not cures for COVID-19, but scientific research suggests they may reduce risk of morbidity and mortality, hospitalization & death.

Presented by the Association of American Physicians & Surgeons.
Our motto, *Omnia pro aegroto*, means "All for the Patient."

NOTE: On the vaccines they are saying IF shown to be safe and effective. Based on information in this paper that cannot be concluded based on either lack of long-term data or if you look at long-term data 78% the same, it was a terrible failure and not approved.

COVID-19 PREVENTION AND TREATMENT TO REDUCE HOSPITALIZATION AND DEATH

Decisions on prevention and treatment should be made between a patient and a physician. **THIS INFORMATION IS NOT INDIVIDUALIZED MEDICAL ADVICE.**

Substantial Worldwide Evidence Reveals Multiple Treatment Options

Physicians worldwide are prescribing therapies that are effective at reducing hospitalization and death from COVID-19. They have reason to be hopeful based on clinical experience and studies. The current NIH guidelines convey therapeutic nihilism by recommending NO specific treatment until shortness of breath requires hospitalization. Ethical practicing physicians reject the fatalistic NIH recommendations. The following stages of treatment have been studied and expert scientific opinions support treatment at these stages prior to hospitalization.

I. Therapeutic Prevention is the first line of care. It can consist of nutraceuticals, prescription medications, and vaccination, to maximize the human body's ability to prevent disease. Therapy should never be forced on a patient or given without an explanation of potential risks.

II. Early Treatment at the first sign of symptoms is the most natural and ethical medical response to any disease process. A growing international database reveals the effectiveness and safety of low-cost treatments such as hydroxychloroquine and ivermectin. (Source: c19study.com)

III. Advanced Home Treatment can benefit sicker

patients who do not need hospitalization.

If a patient becomes ill with COVID-19 and symptoms begin to worsen, there are multiple aggressive treatment protocols that can be implemented to prevent hospitalization. There are rational treatment approaches based on observation and shared knowledge of the practice of medicine by medical professionals around the world. Most recently, monoclonal antibody therapies have been approved, on an emergency basis by the FDA. They are given as a one-time outpatient IV infusion for high-risk patients and may help prevent hospitalization.

Protecting the freedom to practice medicine since 1943

This information brought to you by the Association of American Physicians and Surgeons

JOHNSON & JOHNSON EXPERIMENTAL VACCINE

Johnson and Johnson is summarized on the link below starting at 20:22 to 48:00.

A Mom's Research Updated 1/2023 on the Covid-19 Vaccine Including Post Protocols

The Johnson & Johnson vaccine does also have potential for antibody dependent enhancement which is the main concern with the other two vaccines available. (Note: chart from their report lists as unknown risk Vaccine-enhanced disease which means antibody dependent enhancement(ADE)). Note it is listed but the risk or danger not explained. ADE was one of, if not, the main reason the coronavirus vaccine was NOT approved in previous study trial attempts done for over 10 years and over a million dollars of SARS-CoV1, 78% the same as SARS-CoV2 (COVID-19). In these animal trails the animals were fine after the shots but then later developed too many antibodies and when exposed to the disease got the virus worse than if they had not been vaccinated and many died.

8.4 Unknown Risks/Data Gaps

- Safety in certain subpopulations

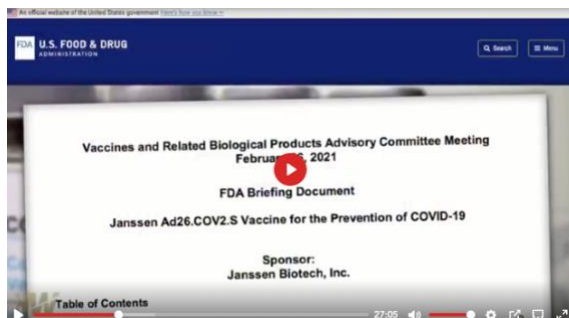

There are currently insufficient data to make conclusions about the safety of the vaccine in subpopulations such as children less than 18 years of age, pregnant and lactating individuals and their infants, and immunocompromised individuals.

- Adverse reactions that are very uncommon or that require longer follow-up to be detected

- Vaccine-enhanced disease

<https://www.bitchute.com/video/fGrVfRKlrYtN/> View 20:22 to 48:00 time

From this video link above -screen shots on this page and next.

Johnson & Johnson 66% efficacy (43% efficacy for people over age 60).

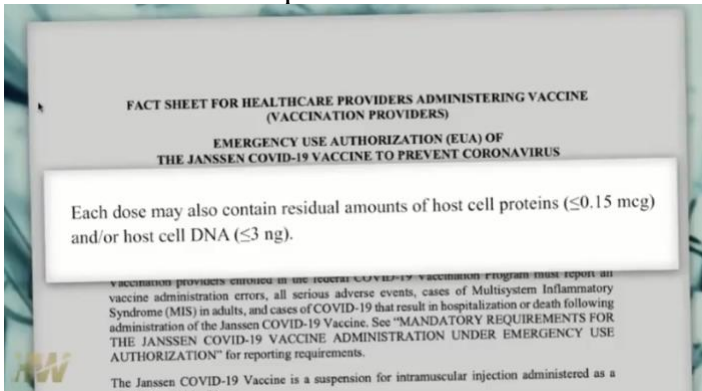

Table 13 shows that the efficacy for over 60 years of age where 81% of the deaths of COVID nationally have

Subgroup	Onset at Least 14 Days			Onset at Least 28 Days		
	Ad26.COV2.S Cases (N)	Placebo Cases (N)	VE% ^a (95% CI)	Ad26.COV2.S Cases (N)	Placebo Cases (N)	VE% ^a (95% CI)
Comorbidity, presence						
Yes	70 (7777)	194 (7798)	64.2% (52.7, 73.1)	44 (7684)	105 (7626)	58.6% (40.6, 71.6)
No	103 (11737)	315 (11746)	67.6% (59.4, 74.3)	69 (11622)	219 (11552)	68.8% (59.0, 76.6)
Age group and comorbidity, presence						
18-59, no	89 (8346)	258 (8411)	65.6% (56.1, 73.3)	58 (8267)	180 (8254)	68.0% (56.8, 76.6)
18-59, yes	48 (4404)	131 (4371)	63.9% (49.4, 74.7)	29 (4350)	79 (4273)	64.0% (44.3, 77.3)
≥60, no	14 (3391)	57 (3335)	76.0% (56.3, 87.6)	11 (3355)	39 (3298)	72.4% (45.0, 87.3)
≥60, yes	22 (3373)	63 (3427)	64.9% (42.2, 79.4)	15 (3334)	26 (3353)	42.3% (-13.1, 71.6)

occurred is only 43%.

Aborted baby cells (host cells) are included.

A Mom's Research Updated 1/2023 on the Covid-19 Vaccine Including Post Protocols

Johnson and Johnson has a history of paying damages and faced thousands of lawsuits from customers (see bottom of first picture). For the COVID experimental vaccine, they have immunity or no liability, so the company does not have to worry about that, only the person who takes the vaccine does and the injured have no recourse.

See below amounts of 8M, 20.4 M, 572 Million, \$417 Million...paid in settlements.

Settled on opioids before going to trial.

The newscaster said that in many of these cases **the company, Johnson & Johnson, failed to warn people of the risks of the drug.**

With the COVID-19 vaccine the companies were given immunity – no liability.

Here below is one example from the MUST READ Adverse Reactions Informed Consent Attachment. Please read that attachment from email sent to you in full or scroll down in full. Critically important.

2h · 🌐

"Dec 18th 2020 - My Dad participated in the Johnson & Johnson Trial COVID vaccine shot. They promised all medical expenses paid for any complications related to COVID for the next 2 years. My Dad found security in the medical expense coverage and possibility to have access to a vaccine- that he decided to do the trial.

Dec 25th 2020 - One week later- Christmas Day - Dad was very fatigued. He felt tired right after the shot and when I spoke with him on Christmas day, I recall he sounded exhausted. Which is unlike him, especially on Christmas.

Jan 4th 2021 By the first of the year, he was very sluggish and found it hard to do his exercises that he does weekly. He always likes to stay active.

Jan 11th - 18th Asthma like symptoms, harder to get through his workouts. Very short of breath and started to be winded very easily. Low grade fevers. Hard to make it through calls at work.

Jan 25th - Dad contacted Johnson & Johnson and they did a COVID test. Results came back 3 days later as negative. They advised he has flu like symptoms and to rest and drink lots of fluids.

Jan 29th my Dad could barely walk. His legs became so weak that he shook when he walked. He thought maybe he was battling a flu and tried to keep resting through the weekend in hopes he would feel better.

Feb 1st - my mom brought him to Lake Mary Emergency room and they immediately transported him via ambulance to Advent Altamonte because of very high troponin levels.

Feb 1st - 4th - My Dad was at Advent Health Altamonte where they ran all kinds of tests and discharged him on the night of Feb 4th. Referring him to an oncologist, infectious disease Dr, cardiologist and PCP.

Feb 5th- Friday I saw my Dad at 11 AM and he could not walk and was very lethargic and sleepy. I called and made all his referral appointments and scheduled him to see his PCP first thing Monday.

Feb 6th- Saturday. I woke up at 6 AM and drove to my parents house and my Dad was completely out of it. He could not get out of bed, pick up his coffee to drink, lift his head. He did not know what year, day, month we were in. We took him to Advent Orlando and within 20 minutes they got him in and found a blood infection and swelling in brain.

Feb 20th We have been here 2 weeks today, and today my Dad started on dialysis.

I am not an anti-vaxxer by any means. But I think there should be some public awareness of the dangers of being part of a trial vaccine. Especially one that is being done in warp speed. And the chance I would recommend someone to get the Johnson & Johnson vaccine, is slim to none. They have denied any type of connection."

Fauci and interviewer where Fauci obviously flips more than once. First about Pfizer, Moderna, that are given immunity or no liability. He says you can sue anyone you want and is not truthful that the companies have no liability. Secondly, on transmission he says 85% (or basically everyone) need to get the shot for herd immunity (which would mean to stop transmission of the virus). Then, in the next question, he says no the vaccine is not known that it will stop transmission (which is true) and masks will need to be worn. (It is known from the trails that the vaccine does not stop transmission.)

Interviewer Instagram (Second link(better) has full first link included, but adds commentary)

<https://www.instagram.com/p/CMQOqwxDNy0/> Full interview within link below but adds commentary

In this open letter I am appealing to the WHO and all stakeholders involved, no matter their conviction, to immediately declare such action as THE SINGLE MOST IMPORTANT PUBLIC HEALTH EMERGENCY OF INTERNATIONAL CONCERN.

As a dedicated virologist and vaccine expert I only make an exception when health authorities allow vaccines to be administered in ways that threaten public health, most certainly when scientific evidence is being ignored. The present extremely critical situation forces me to spread this emergency call. As the unprecedented extent of human intervention in the Covid-19-pandemic is now at risk of resulting in a global catastrophe without equal, this call cannot sound loudly and strongly enough.

Also, not mentioned previously from the Pfizer and Moderna Trials:

In Pfizer trials 3410 cases of suspected COVID but did not give PCR test.

Vaccine does not stop transmission.

This block contains a collage of images. On the left is a portrait of Peter Doshi, Associate Editor of the British Medical Journal. To his right is a screenshot of a BMJ opinion piece titled "Peter Doshi: Pfizer and Moderna's '95% effective' vaccines—we need more details and the raw data". Below this is a video player showing a segment of the opinion piece. The video text reads: "Pfizer reported 170 PCR confirmed covid-19 cases, split 8 to 162 between vaccine and placebo groups. But these numbers were dwarfed by a category of disease called 'suspected covid-19'—those with symptomatic covid-19 that were not PCR confirmed. According to FDA's report on Pfizer's vaccine, there were '3410 total cases of suspected, but unconfirmed covid-19 in the overall study population, 1594 occurred in the vaccine group vs. 1816 in the placebo group.'" To the right of the video player is a slide titled "8.2 Unknown Benefits/Data Gaps" with a bulleted list of concerns.

Peter Doshi: Pfizer and Moderna's "95% effective" vaccines—we need more details and the raw data
January 6, 2022

Five weeks ago, when I raised questions about the results of Pfizer's and Moderna's covid-19 vaccine trials, all that was in the public domain were the study protocols and a few press releases. Today, two journal publications and around 400 pages of summary data are available in the form of multiple reports presented by and to the FDA prior to the agency's emergency authorization of each company's mRNA vaccine. While some of the additional details are reassuring, some are not. Here I outline new concerns about the trustworthiness of the reported efficacy results.

8.2 Unknown Benefits/Data Gaps

- Duration of protection
- Effectiveness in certain populations at higher risk of severe COVID-19
- Effectiveness in individuals previously infected with SARS-CoV-2
- Effectiveness in pediatric populations
- Vaccine effectiveness against asymptomatic infection
- Vaccine effectiveness against long-term effects of COVID-19 disease
- Vaccine effectiveness against mortality
- Vaccine effectiveness against transmission of SARS-CoV-2

FACT SHEET FOR RECIPIENTS AND CAREGIVERS EMERGENCY USE AUTHORIZATION (EUA) OF THE MODERNA COVID-19 VACCINE TO PREVENT CORONAVIRUS DISEASE 2019 (COVID-19) IN INDIVIDUALS 18 YEARS OF AGE AND OLDER

You are being offered the Moderna COVID-19 Vaccine to prevent Coronavirus Disease 2019 (COVID-19) caused by SARS-CoV-2. This Fact Sheet contains information to help you understand the risks and benefits of the Moderna COVID-19 Vaccine, which you may receive because there is currently a pandemic of COVID-19.

The Moderna COVID-19 Vaccine is a vaccine and may prevent you from getting COVID-19. There is no U.S. Food and Drug Administration (FDA) approved vaccine to prevent COVID-19.

WHAT IS AN EMERGENCY USE AUTHORIZATION (EUA)?

The United States FDA has made the Moderna COVID-19 Vaccine available under an emergency access mechanism called an EUA. The EUA is supported by a Secretary of Health and Human Services (HHS) declaration that circumstances exist to justify the emergency use of drugs and biological products during the COVID-19 pandemic.

The Moderna COVID-19 Vaccine has not undergone the same type of review as an FDA-approved or cleared product. FDA may issue an EUA when certain criteria are met, which includes that there are no adequate, approved, and available alternatives. In addition, the FDA decision is based on the totality of the scientific evidence available showing that the product may be effective to prevent COVID-19 during the COVID-19 pandemic and that the known and potential benefits of the product outweigh the known and potential risks of the product. All of these criteria must be met to allow for the product to be used during the COVID-19 pandemic.

The EUA for the Moderna COVID-19 Vaccine is in effect for the duration of the COVID-19

Study in Israel shows vaccinated getting sick with COVID Variant 8 times more than unvaccinated (Not large number of people)

(This is what the previous coronavirus studies of antibody dependent enhancement predict.)

https://www.theepochtimes.com/mkt_morningbrief/ccp-virus-variant-affects-vaccinated-people-more-than-unvaccinated-people-study_3770982.html?utm_source=morningbriefnoe&utm_medium=email&utm_campaign=mb-2021-04-12&mktids=2f40035469c85954779811da687374cc&est=

<https://www.cnbc.com/2021/04/11/covid-variant-from-south-africa-was-able-to-break-through-pfizer-vaccine-in-israeli-study.html>

- The researchers found the prevalence of B.1.351 (South African Variant) among patients who received two doses of the vaccine was about eight times higher than those who were unvaccinated. (that is predicted based on previous coronavirus studies 78% the same as COVID-19 – antibody dependent enhancement white paper excerpt below)

SMD whitepaper information excerpt below on Antibody Dependent Enhancement (ADE) – Most dangerous reason not to have the vaccine and also on infertility below that. (Nov 2020)

These excerpts are from the white paper also attached to the email sent.

VI. COVID-19 Experimental Vaccines & Antibody-Dependent Enhancement

A well-documented and serious side effect of vaccines is known as pathogenic priming or antibody dependent or immune enhancement. (The COVID-19 vaccines have it listed as a Known Risk using the name vaccine enhancement reaction.) It is difficult to prove, with doctors and scientists and the public tend to initially deny its existence by saying a person(s) has “a worse virus.” One way we learn that ADE is a real effect is by comparing vaccinated and unvaccinated populations. If entire populations are immediately vaccinated with these experimental vaccines, the true incidence of ADE will never be known, as many cases will just be falsely described as a “new strain” or “more severe strain.”

Although most readers have never heard of it, antibody-dependent-enhancement is so well known, it even has its own Wikipedia page: https://en.wikipedia.org/wiki/Antibody-dependent_enhancement

Note that coronaviruses are commonly implicated.

NB19i0yP1Zc8nr5FhlNXL6DoyCwMg_jYSRIeJsPg0iB1pBhWWpyYreSQ&utm_content=102466647

&utm_source=hs_email (Link not found)

18

ADE is especially tricky because it is a delayed reaction. Initially all seems well. The person seems to have a great immune response but then becomes deadly when the person is exposed to the virus in the wild. It is well known that you must do animal testing first to try to rule out ADE. Strong vaccine advocates Dr. Offit and Dr. Hotez, who would be expected to be enthusiastic about these experimental vaccines, have not really endorsed these new experimental vaccines, because previous coronavirus vaccines have a long history of failure due to “antibody dependent enhancement.”

A Mom's Research Updated 1/2023 on the Covid-19 Vaccine Including Post Protocols

Antibody Dependent Enhancement (ADE), is when anti-COVID antibodies, created by a vaccine, instead of protecting the person, cause a more severe or lethal disease when the person is later exposed to SARS-CoV-2 in the wild. The vaccine amplifies the infection rather than preventing damage. It may only be seen after months or years of use in populations around the world. This paradoxical reaction has been seen in other vaccines and animal trials. One well-documented example is with the Dengue fever vaccine, which resulted in avoidable deaths.^{35, 36}

Dengue fever has 100-400 million infections, 500,000 hospitalizations, and a 2.5% fatality rate annually worldwide. It is a leading cause of death in children in Asian and Latin American countries. Despite over 50 years of active research, a Dengue vaccine still has not gained widespread approval in large part due to ADE. ³⁷ Sanofi Pharmaceutical spent 20

35 36 37

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7642463/> 19

years and nearly \$2 billion to develop the Dengue vaccine and published their results in the NEJM, which was quickly endorsed by the WHO. But there were scientists who clearly stated the danger, which the Philippines ignored, and they decided to give it to hundreds of thousands of children in 2016. Later when they were exposed in the wild, many got severely ill and 600 children died. Criminal charges were filed against the decisionmakers.³⁸

This same thing happened in the 1960's with Respiratory Syncytial Virus (RSV) – they also skipped the animal studies and gave the vaccine to 35 children and initially it looked like it worked well. But when those children were exposed to the wild virus, they got much sicker and then two of the kids died, which became a scandal. RSV typically is mild in children – whereas vaccinating children for it led to death.³⁹

This has happened with other coronaviruses. SARS-CoV-1 had about 35 vaccine candidates, the best four were trialed in ferrets and it looked like it worked well. But when those ferrets were challenged in the wild they got very ill and died. Extremely concerning is that this antibody-dependent amplification, ADE, has long been known from experiments with corona vaccines in cats, for example. In the course of these studies all cats that initially tolerated the vaccination well died after catching the wild virus.⁴⁰

The original SARS-CoV, a coronavirus 78% similar to the current SARS-CoV-2 causing COVID-19, caused an epidemic in 2003. Scientists attempted to create a vaccine. Initially it appeared promising, but ultimately it was abandoned because although the mice tolerated the vaccine and produced antibodies, when the mice were exposed to the actual virus in the wild, they died due to what we would think of as sudden severe cytokine storm.⁴¹

SARS-CoV-2, which can lead to COVID-19, was first documented less than one year ago with scant information on the disease course and interactions with immune systems from the various SARS-CoV-2 strains. We do know that SARS-CoV-2 is unique from other coronaviruses in that select individuals mount an aggressive immune response resulting in cytokine storm and death. It is still largely unknown why the immune response to SARS-

38

<https://2020news.de/en/dr-wodarg-and-dr-yeardon-request-a-stop-of-all-corona-vaccination-studies-and-call-for-co-signing-the-petition/>

CoV-2 varies so much from a large percentage of asymptomatic patients to rapid death in others.

Science, Nature, Journal of Infectious diseases and others, have already documented ADE, or vaccine-associated hypersensitivity (VAH) risks in relation to the development of experimental COVID-19 vaccines.⁴²
43 44

The Phase III trials from Pfizer, Moderna and AstraZeneca provide little insight into ADE and VAH. Not only is the sample size of vaccinated participants who developed COVID19 very small, but, based on the information publicly available, it is unknown which strains of SARS-CoV-2 afflicted the participants in the trials.

This ADE response is so concerning that many scientists already agree the risk is much too

high to release these experimental vaccines to the public at large.

On December 1, 2020,

the ex-Pfizer head of respiratory research Dr. Michael Yeadon and the lung specialist and

former head of the public health department Dr. Wolfgang Wodarg filed an application

with the European Medicine Agency responsible for approving drugs in the European

Union, for the immediate suspension of all SARS CoV 2 vaccine studies, in particular the

BioNtech/Pfizer study on BNT162b.⁴⁵

⁴⁶

One of the biggest reasons they cited was the

formation of so-called “non-neutralizing antibodies” can lead to an exaggerated immune reaction, especially when the test person is confronted with the real, “wild” virus after vaccination. This so-called antibody-dependent amplification, ADE, has long been known from experiments with corona vaccines in cats, for example. In the course of these studies all cats that initially tolerated the vaccination well died after catching the wild virus.

If these experimental coronavirus vaccines cause an ADE reaction and millions and millions of Americans have taken this vaccine, instead of a 99.98% cure rate for COVID19 we could face a 20-30% death rate when all these millions of Americans are exposed to COVID-19 in the wild.⁴⁷

There is a risk of long-term infertility:

There is evidence to support that the vaccine could cause permanent auto-immune rejection of the placenta.

Placental inflammation resulting in stillbirths mid-pregnancy (second trimester) is seen with COVID-19 and with other similar coronaviruses. The way the experimental vaccines work, it is concerning that that deleterious effect on the placenta, which in the wild only lasts as long as the acute illness, would instead be lifelong.

There is a case report of a woman with a normally developing pregnancy who lost the otherwise healthy baby at five months during acute COVID-19. The mother's side of the placenta was very inflamed. This "infection of the maternal side of the placenta inducing acute or chronic placental insufficiency resulting in miscarriage or fetal growth restriction was observed in 40% of pregnant women with similar coronaviruses" 54 Thus far SARS-CoV-2 appears to be similar. 55 This issue has not been studied despite saying that "Additional studies of pregnant women with COVID-19 is warranted to determine if SARS-CoV-2 can cause similar adverse outcomes."

The purported mRNA vaccines may instigate a similar reaction as the virus. There is a component in the vaccine that could cause this same auto-immune rejection of the placenta but indefinitely. In layman's terms: getting COVID-19 has been associated with a high risk of mid-pregnancy miscarriage because the placenta fails – but the vaccine may do the exact same thing – but not for just the few weeks of being sick – but forever. Meaning repeated pregnancies would keep failing ~ mid-pregnancy.
